Branding and White Labelling

Flexiant Cloud Orchestrator allows the licensee and billing entities to customise the UI for branding purposes through the creation of themes. The addition of multiple themes means that a single platform managed by Flexiant Cloud Orchestrator can support multiple companies with different customer bases and branding requirements. Themes can be used to modify the following elements of the UI:

> A billing entity can only create a theme if the MBE has shared the theme provider with them.

- Logos.
- Colour branding.
- Fonts.

To change the branding for a billing entity, do one or more of the following as required:

- Create a theme
- Modify a theme
- Change the language or currency settings

The licensee and billing entities can also customise the following:

- Branding for PDF invoices. For instructions on how to modify branding for PDF invoices, see Managing a Billing Entity.
- Internationalisation options, such as language and currency settings. For more information, see Language Management.
- Resource types that product offers are available for. This provides a means to restrict the types of product offers that customers can buy. For more information, see Managing a Billing Entity.
- Content of emails sent to customers. For more information, see Managing a Billing Entity.

Furthermore, both the licensee and billing entities can choose to display tabs and widgets with a different name, size, or position, or not at all. For more information about customising tabs and widgets, see the following topics:

- Adding, Modifying, and Deleting Tabs.
- Adding, Modifying, and Deleting Widgets.

Create a theme

> A billing entity can only create a theme if the MBE has shared the theme provider with them.

For instructions on how to create a theme, see Creating a theme.

Modify a theme

> A billing entity can only modify a theme if the MBE has shared the theme provider with them.

For instructions on how to modify a theme, see Managing a theme.

Change the language or currency settings

Language

The language files for each billing entity can be specified, allowing most text strings within the user interface to be translated into a different language, or tailored to suit the customer base. For more information, see Language Management.

Currency

The tax rates can be customised to suit the particular needs of the country of operation.
